- Polyester, ThremoTuff, and Kapton high temperature labels
- Optional serialization software
- Multiple label with different print; application optional
- Output to bucket standard, out to 50 slot tray optional

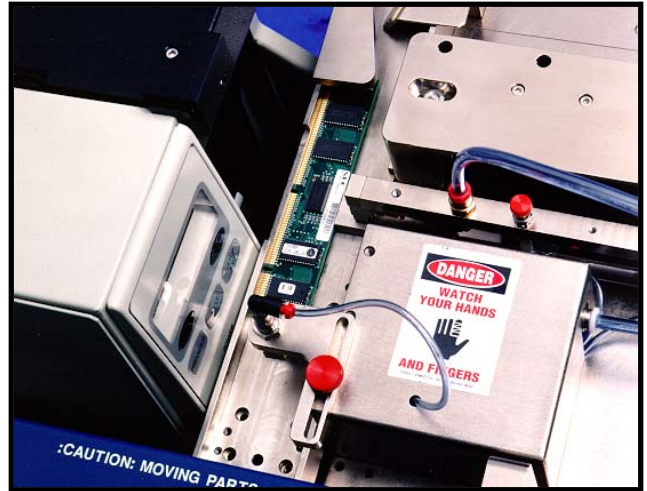

The 3000BL-SIMM Handler integrates an Exatron Model 3000B test handler with a SIMM/DIMM CO kit and a Zebra label printer. This system allows one SIMM to be tested while the previous good SIMM is being labeled. There is an option that allows the labeler to apply the label, then move the SIMM down and place a new label with a different print. Up to 5 uniquely printed labels can be applied on any X/Y location on the SIMM. The labels must all be the same size, with the same orientation. This option can also be added to our Model L3 label only handler.

The printer prints and applies one label at a time. There is no queue of wasted labels. If you need to apply only one label, all software options are available. If applying multiple labels, Exatron will supply the printer control software as part of the option and supply the required PC as an additional option.

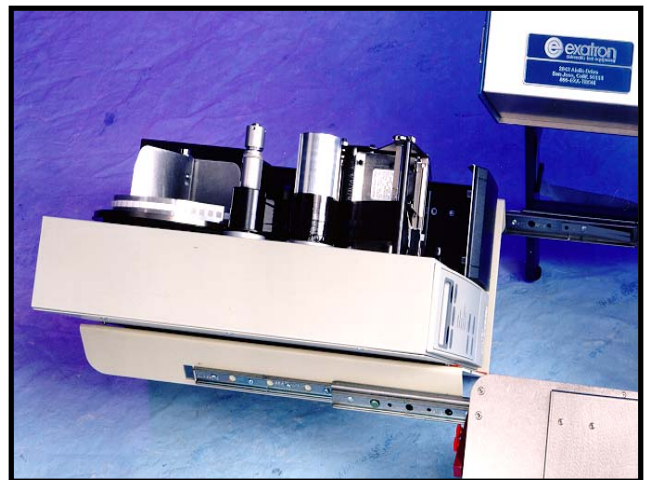

Built-in PLC Computer control (Handler only)
Extensive self-diagnostic software
Size: 42"W by 26"D by 30"H
Weight: 75 lbs (with printer)
Power: 100-240 VAC 50/60 Hz
Air: 80 PSI 1CFM clean shop air required (most kits)
1-year factory warranty
